  - 1. If the CONTRACT ADMINISTRATOR has not received a response from the CONTRACTOR within one week of delivery, the CONTRACT ADMINISTRATOR shall issue \$100 fine to be deducted from the next invoice.   - 1. If the inspection shows the item(s) have been corrected, no fine will be issued.
  - 2. Should the inspection show that any of the item(s) remain non-compliant the CONTRACT ADMINISTRATOR shall issue \$100 fine to be deducted from the next invoice and send a letter to the CONTRACTOR spelling out the details of the fine and the actions needed to regain compliance with the contract.
  - 3. The CONTRACTOR shall be responsible for notifying the CONTRACT ADMINISTRATOR in writing when non-compliant item(s) have been corrected and are ready for inspection.
- D. The CONTRACT ADMINISTRATOR shall also send a letter to the CONTRACTOR spelling out the details of the fines and the actions needed to regain compliance with the contract. This letter shall also include a written warning of potential Contract Termination due to non-compliance.
- E. Should the contract non-compliance continue requiring multiple written notifications and meetings without improvement or correction, a written notice of CONTRACT TERMINATION will be sent to the CONTRACTOR.

In the event of such termination, the MDOT/CRC may deem appropriate to perform services similar to those so terminated. The CONTRACTOR shall be liable to MDOT/CRC for any excess costs for such services. The CONTRACTOR shall not be liable for any increased cost if failure to perform the contract arises out of any cause beyond his/her control and without his/her fault or negligence.

  - a. Where the flowerbed is adjacent to turf, mound the soil in the center of the bed to 2-4 inches above existing soil level then taper the soil to the edge of the bed.
  - b. When bed has concrete bordering it, keep soil 1" down and 2-3" in back of concrete. This will help to stop the soil from washing out of the bed when it rains or is watered.
  - c. When plants are to be grown in a raised planter/bed, mounding of soils as discussed at the Pre-Maintenance Meeting
  - d. Where mulch is used within the flowerbeds – do not mound mulch around plants. Assess the condition of the existing mulch and replace or add to where necessary. Contact CONTRACT ADMINISTRATOR for clarification if needed

### B. Procedures for planting annual flowers

1. CONTRACTOR will furnish flower species as specified as specified during Pre-Maintenance meeting and in contract. **IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE A SAFE PLANTING DATE BASED ON THE GEOGRAPHICAL LOCATION OF THE REST AREA AND HISTORICAL WEATHER CONDITIONS. ANY DEAD PLANTS SHALL BE REPLACED BY THE CONTRACTOR AT NO EXPENSE TO MDOT.**
2. Just prior to planting, add quantity of fertilizer as specified for flowerbeds. Rake and blend fertilizer into the top 2" of soil.
3. Space plants according to the spacing chart.
4. Dig hole slightly larger than the root ball, set the plants at the same level at which they were growing in the container. Carefully firm soil around the roots.

### D. Procedures for maintaining flowers

#### 1. Watering

- a. Do not allow soil to dry out.
- b. Water in the morning.
- c. Water thoroughly, with water hose, allowing the water to penetrate down to a depth of four to six inches to encourage deep root growth. Probe the soil to determine when the water has reached these depths.

#### 2. Weeding

- a. Remove weeds daily.
- b. Remove weeds carefully either by pulling or lightly scratching the surface with a hoe in order to cut weeds off just below the soil level.

3. Removing Faded Flowers: This is known as "deadheading" and is necessary to keep the plants attractive, from going to seed and to prevent diseases (because of deadheading,

the plants will produce more flowers and be tidier). See table below for the frequency and maintenance procedure required for each variety.

4. Deadheading According To Variety: All the plant material we will be growing at the Rest Area(s) is/are listed below. The plant varieties are broken down into three maintenance levels. Each level explains how to maintain the particular variety throughout the entire season.

<b>PLANT VARIETY BASED ON MAINTENANCE</b>	
<b>LOW MAINTENANCE:</b> Faded flowers fall cleanly from the plant and do not need removing	
Alyssum	Dusty Miller
Basil	Flowering cabbage and kale
Begonias	Impatiens
Coleus	Vinca
Dahlberg daisy	
<b>SEMI-LOW MAINTENANCE:</b> Shear back once in mid-July. Shearing back is another form of deadheading. This is done only with this particular plant material. Only enough growth is sheared to remove the flower heads. <b>No more than 33% - 50% of the plants top growth should be removed</b>	
Lobelia	
Petunia	
<b>MEDIUM MAINTENANCE:</b> Plants that need deadheading at least twice a week or as blossoms die. Pinch off faded flowers with your fingers just below the flower head, or pinch off complete stems depending on the particular plant. Be sure to remove the seedpod also.	
Brachycome (Swan River Daisy)	Rudbeckia
Cosmos	Salvia
Dianthus	Snapdragon
Geraniums	Strawflower
Marigold	Verbena
Pansies	

5. Fall Plant Removal (as approved by MDOT)

After frost has blackened the tops of the annuals, remove plants, roots and all, from the beds and rake smooth.

**NOTE: The CONTRACTOR is responsible for providing the flowers, peat mix and fertilizer, as specified by MDOT, for the Contract Period growing seasons.**
